

Beyond 2030

The BHTAC has overseen the development of this *Safer Bruce 2030 Action Plan* towards achieving the Queensland Government's ambitious target of reducing the rate of fatalities along the Bruce Highway by 60 per cent by 2030.

This Action Plan concludes in 2030, however, beyond that, the *15-year Vision and Action Plans for the Bruce Highway*, also overseen by the BHTAC, identifies further priorities to continue significant safety upgrades designed to save lives and prevent serious injuries in this corridor.

Along with influencing positive driver behaviour through education and enforcement, these future safety upgrades will also benefit from even more advances in technology over time.

As part of the *Safer Bruce 2030 Action Plan* and its companion *15-year Vision and Action Plans for the Bruce Highway* documents, the BHTAC recommends periodic reviews of the Action Plans by TMR at every five-year tranche. This will ensure the objectives, costs, scope, assumptions and growth predictions remain relevant.
