Red Christmas pride

Ruellia graecizans

Native to South America, red Christmas pride was introduced to Far North Queensland as an ornamental. It is shade-loving and invades disturbed areas of rainforest and creek banks.

Legal requirements

Red Christmas pride is not a prohibited or restricted invasive plant under the Biosecurity Act 2014. However, by law, everyone has a general biosecurity obligation (GBO) to take reasonable and practical measures to minimise the biosecurity risks associated with invasive plants under their control.

Local governments must have a biosecurity plan that covers invasive plants in their area. This plan may include actions to be taken on red Christmas pride. Some of these actions may be required under local laws. Contact your local government for more information.

Description

Red Christmas pride is a wiry sub-shrub that grows up to 60 cm high with a dense, bushy, spreading habit.

Leaves are opposite, up to 12 cm long, becoming smaller towards the top of the plant and are glossy green, narrowly oval and hairless.

Bright red, swollen, tubular flowers that are streaked yellow inside appear in small clusters on long stalks in the leaf axils. Petals are up to 3 cm long.

Control

Manual control

Hand pull seedlings and small plants, ensuring that all stem fragments and roots are removed. Plant pieces should either be bagged and taken to the dump or hung up off the ground to prevent reshooting.

Herbicide control

There are no herbicide products specifically registered for the control of red Christmas pride in Queensland. However, a permit allows people generally to use some herbicide products to control red Christmas pride as an invasive plant in various situations.

See Table 1 for the treatment options in situations allowed by the permit.

Prior to using the herbicides listed under this permit (PER11463) you must read or have read to you and understand the conditions of the permit. To obtain a copy of this permit visit apvma.gov.au.

Table 1. Herbicides for the control of red Christmas pride

Landholders and contractors should check if the property is in a hazardous area as defined in the *Agricultural Chemicals Distribution Control Act 1966* prior to spraying herbicides containing picloram.

Follow up

Monitor treated areas regularly for any new seedlings or regrowth.

More information

More information is available from your local government or visit biosecurity.qld.gov.au.

Situation	Herbicide	Rate	Registration details	Comments
Non-agricultural areas, domestic and public service areas, commercial and industrial areas, bushland/native forests, roadsides, rights-of-way, vacant lots, wastelands, wetlands, dunal and coastal areas	Glyphosate 360 g/L (e.g. Roundup Biactive) and other formulations	1 L per 100 L water For other formulations consult PER11463	APVMA permit PER11463 (permit expires 30/04/2027)	Spot spray
	Fluroxypyr 200 g/L (e.g. Flagship 200)	225 mL to 750 mL per 15 L water		
	Fluroxypyr 333 g/L (e.g. Starane Advanced)	135 to 450 mL per 15 L water		
	Triclopyr 300 g/L + Picloram 100 g/L (e.g. Conqueror)	350 to 500 mL per 100 L water plus wetting agent or spray oil		
	or Triclopyr 300 g/L + Picloram 100 g/L + Aminopyralid 8 g/L (e.g. Grazon Extra)			

Read the label carefully before use. Always use the herbicide in accordance with the directions on the label.

Fact sheets are available from biosecurity.qld.gov.au. The control methods recommended should be used in accordance with the restrictions (federal and state legislation, and local government laws) directly or indirectly related to each control method. These restrictions may prevent the use of one or more of the methods referred to, depending on individual circumstances. While every care is taken to ensure the accuracy of this information, the department does not invite reliance upon it, nor accept responsibility for any loss or damage caused by actions based on it.
