### **Acknowledgement of Traditional Owners**

We respectfully acknowledge the Aboriginal and Torres Strait Islander peoples as the Traditional Owners and Custodians of this Country – the lands and seas on which we meet, live, learn, work and play. We acknowledge those of the past, the Ancestors whose strength has nurtured this land and its people, and we recognise their connection to land, sea and community. We pay our respects to them, their culture and to their Elders past and present.

This publication has been compiled by Water Systems and Hydrometric Operations, Water Operations and Systems, Department of Regional Development Manufacturing and Water.

# 1. Summary

This document lists the current sites which make up the Department's stream gauging station network. Data collected at stream gauging stations are published on the Department's [Water Monitoring Information Portal](#). Data from all water monitoring sites in Queensland is collected and displayed in Australian Eastern Standard time (UTC+10).

## 2. Network list headings

Heading	Description
<b>Station ID</b>	A unique identifier for the site. The numbering system is based on Australian Water Resource Council drainage basin numbering comprised of seven (7) numbers and one (1) letter (See Figure 1).
<b>Station Name</b>	A unique name for the station.
<b>Office</b>	The departmental office operating the site. AYR: Ayr BBG: Bundaberg BNE: Brisbane INF: Innisfail MBA: Mareeba MKY: Mackay RCK: Rockhampton TBA: Toowoomba
<b>Station Type</b>	G = Time series flow data are collected at the site. GQ = Time series flow and water quality data are collected at the site.
<b>Latitude</b>	The geographic coordinates of the site. Details are given in degrees to 5 decimal places, although precision to this level is not guaranteed.
<b>Longitude</b>	
<b>Datum</b>	The datum the geographic coordinates are in. At this level of precision for the coordinates, the difference between GDA94 and GDA2020 is insignificant.
<b>AMTD</b>	Adopted Middle Thread Distance. This distance along the middle of the river upstream from its mouth or junction with another watercourse in kilometres.
<b>Area</b>	Catchment Area. The area of the catchment above the site in square kilometres.
<b>Height</b>	Stream height data are collected at the site.
<b>Discharge</b>	Stream flow data are collected at the site.
<b>Rain</b>	Rainfall data are collected at the site.
<b>WQ</b>	Time series water quality data was collected from this site during the last Financial Year (1 July 2023 to 30 June 2024).
<b>General Parameters</b>	Laboratory-analysed sample of the water solution, yielding 35 water quality indicators, including levels of major ions, dissolved metals, and suspended solids.
<b>Nutrients</b>	Laboratory-analysed frozen samples of the water solution, yielding nutrient concentrations (mg/l). Indicators include unfiltered (soluble + insoluble) nitrogen and phosphorus and filtered (soluble) nitrogen and phosphorus compounds.
<b>Samples Per Year</b>	The target number of manual water quality bottled samples to be taken each year. Note the actual number of samples taken per year may differ due to weather events affecting accessibility of sites.

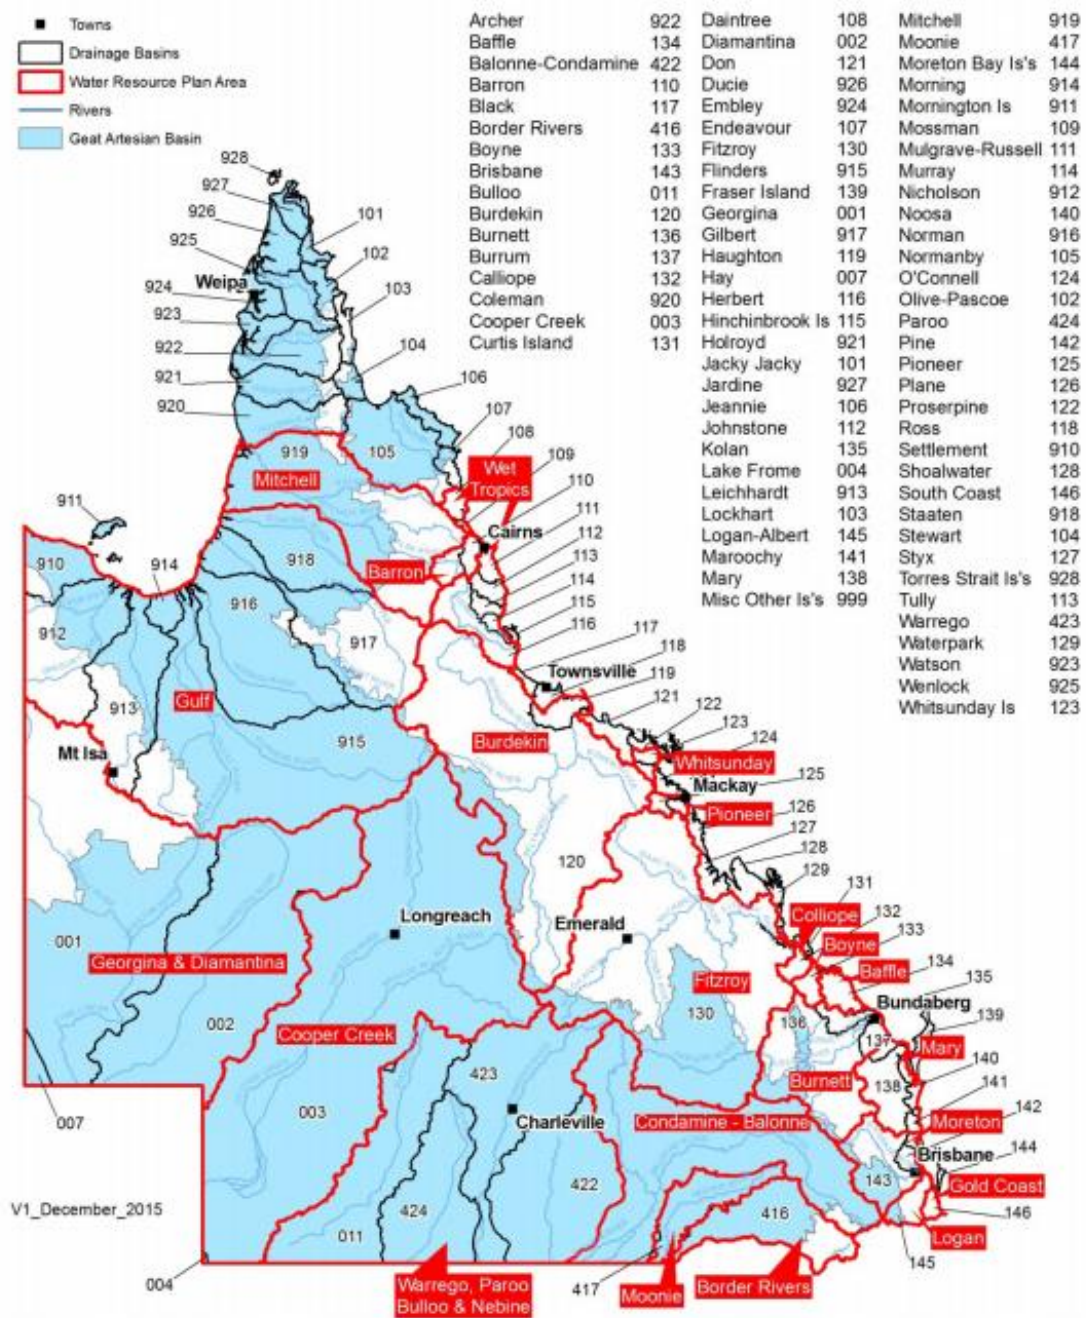

Figure 1 - Queensland drainage basins

### 3. Network background

The Department manages, operates and maintains approximately 400 stream gauging stations across Queensland. Approximately 160 of these sites also collect time series water quality information including conductivity and temperature. The primary driver for the collection of data under the Stream Gauging Station Network is to meet legislative requirements defined in the *Water Act 2000*.

Data collected at sites on the Stream Gauging Station Network also provides information for the Bureau of Meteorology's Queensland flood warning services.

The Stream Gauging Station Network is operated by trained hydrographic staff within a quality management environment. The quality management system (QMS) is certified to meet ISO standard 9001:2015. Stream gaugings are taken throughout a full range of low and high flow conditions at each site on the Stream Gauging Station Network to enable derivation of accurate streamflow volumes. Streamflow measurements are an integral part of producing volumetric discharge data at a site.

In accordance with requirements of the QMS, the department reviews its water monitoring networks every three to five years to ensure they remain fit-for-purpose and meet the primary requirements as defined in the Water Act. The most recent network review was undertaken in 2018 and this document incorporates changes made to the network in response to recommendations from the surface water network review.

The Stream Gauging Station Network is also updated annually outside of reviews based on operational requirements and through a formal request for change process.

## 4. Customer feedback

We welcome your feedback. Please contact us at [water.monitoring@rdmw.qld.gov.au](mailto:water.monitoring@rdmw.qld.gov.au) with the subject heading 'Water Monitoring Information Feedback'.
