QUEENSLAND GOVERNMENT VACANCIES GAZETTE

The Queensland Public Service is committed to equal opportunity in employment. Selection will be given on the basis of merit only and fair consideration will be given to all applicants. The Queensland State Government's policy is to seek to retain skilled staff. Registered deployees who apply for an advertised job will be considered before other applicants. The symbol (h) appears next to vacancies where an exemption from this requirement applies. Deployees are to indicate in their application for the advertised job that they are registered with the Office of the Public Service Commissioner. The Queensland Public Service Commissioner is committed to equal opportunity in employment. Selection will be given on the basis of merit only and fair consideration will be given to all applicants.

CONTINUOUS APPLICANT POOLS

A continuous applicant pool allows you to apply for jobs within an occupation where vacancies are regularly available. This means that agencies can 'dip' into the pool for suitable applicants as soon as they have a vacancy. You can submit or refresh your application at any time. If you are refreshing your application, make sure that you indicate this either on your email or, if sending by post, in a covering letter. In search results, continuous applicant pools can be identified by 'Ongoing' in the 'Closes' column of a search result.

Note: If a continuous applicant pool is closing, applicants will be notified two weeks prior to this date. Applications may be used for up to six months after the pool closes.

MULTI-AGENCY POOLS

Some Queensland Government agencies are on the lookout for people to fill similar jobs or occupations at the same time. Some of these jobs have a fixed closing date and others are ongoing (continuous applicant pools). With multi-agency pools, you only have to apply once to access job opportunities across participating agencies. Your application will then be able to be viewed and assessed by all the agencies in that pool - or, if you prefer, you can specify that you want to be considered only for particular agencies. Make sure you check the specific vacancy to find out how each pool works.

HOW TO APPLY

When you have found the job you would like to apply for.

1. You can phone for a copy of the information kit or you can download the documents from the Smart Jobs and Careers website at www.jobs.qld.gov.au. The information kit will include:
 - the position or job description detailing: background of the department or work area; roles and responsibilities, and selection criteria
 - a job information package, outlining the procedure for preparing and sending in your application, and
 - an application cover sheet.
2. Do your homework - research the agency to understand the background to the job.
3. Prepare your application. This should include your:
 - completed cover sheet (available on jobs online or in the kit mailed to you)
 - covering letter
 - resumé / curriculum vitae
 - names and contact details of (2) referees, and
 - responses to the selection criteria if required.
4. Mail or email your application (Details of where and how are available in either the job description or the job information package).

Check with the job vacancy contact person if you are unsure about how or where to submit your application or how many copies to send. Make sure you send your application by the closing date. If you don't, it may not be accepted. Once your application is received, you will usually be sent a written acknowledgement.

When applying for Continuous Applicant Pools, please check each vacancy for application instructions.

(4) Durability Class 4 Species

All species of timber other than species of timber listed in Durability Class 1, 2 and 3.

Notes to Schedules

- (a) Retention is expressed as percent mass/mass of nominated preservative element or compound in the oven dry wood of the analytical zone as defined in Schedule 7.
- (a1) All products treated to this retention level must carry a warning, advising that the product may not be used in a load bearing application where routine inspection and maintenance can not be readily carried out.
- (a2) Approved for use on hardwood veneer based products made up of veneers up to and including 2.5 mm thick.
- (a3) This treatment applies to timber where the lesser cross-sectional dimension is equal to or less than 45 mm and the greater cross-sectional dimension is equal to or less than 140 mm.
- (a4) All products treated to this penetration pattern must advise the following printed information on each piece - "Envelope treated framing. Use only South of the Tropic of Capricorn".
- (a5) This preservative shall be formulated with the active ingredients propiconazole and tebuconazole in the proportion 1:1. In the formulated preservative and in the preservative solution used to treat timber, the proportion of actives shall fall within the limits:
- | | |
|----------------------|---------------------|
| Propiconazole 45-55% | Tebuconazole 45-55% |
|----------------------|---------------------|
- (a6) Treated timber shall contain not less than 45% of the nominated minimum retention of total actives as Tebuconazole and 45% as Propiconazole.
- (a7) This treatment applies to timber where the lesser cross-sectional dimension is equal to or less than 45 mm.
- (a8) When analysed using the analytical technique described in Australian Standard AS1605.3 "Determination of Bifenthrin in Glueline-treated Timber".
- (a9) Approved for use on softwood veneer based products made up of veneers up to and including 4.3 mm thick. Where the outer veneers of softwood veneer based products are greater than 3.2 mm and less than or equal to 4.3 mm thick, and where the outer veneers comprise more than 40% of the total cross-section of the product, an exterior application of bifenthrin is to be applied to achieve a minimum retention of 0.0027% m/m bifenthrin based on the oven dried weight of the outer veneers of the finished product. The retention in the outer veneers is to be confirmed by chemical analysis.
- (a10) When analysed using the analytical technique **Method for analysis of Cypermethrin in Glueline Treated Hardwood Engineered Wood Products**, Ensis, June 2007.
- (b) Preservatives of this type shall be formulated from either salts or oxides of bivalent copper, hexavalent chromium and pentavalent arsenic. In the formulated preservative and in the preservative used to treat timber, the ratio of these active elements shall fall within the limits:
- | | | |
|----------------|-----------------|----------------|
| Copper: 23-25% | Chromium 38-45% | Arsenic 30-37% |
|----------------|-----------------|----------------|
- (b1) Approved for use on hardwood veneer based products made up of veneers up to and including 3.6 mm thick.

- (b2) When analysed using the analytical technique described in Australian Standard AS1605.3 “Determination of Imidacloprid in Glueline-treated Timber – ELISA Analysis”, the recovery factors to be used are:

“0.55” for laminated veneer products made with phenol formaldehyde based glues.
(% imidacloprid = analysed retention x 1/0.55)

“0.24” for particle board and particle based products made with urea formaldehyde based glues.
(% imidacloprid = analysed retention x 1/0.24)

- (b3) Not approved for use with medium density fibreboard (MDF)

- (b4) When analysed using the analytical technique described in Australian Standard AS1605.3 “Determination of Imidacloprid in Glueline-treated Timber – ELISA Analysis”, the recovery factor to be used is:

“0.934” for particle board and particle based products made with either/or PF or MDI resins.
(% imidacloprid = analysed retention x 1/0.934)

- (b5) When used for particle board, oriented strand board or glued particle based products, particles or strands must be treated with the preservative compounds before gluing of the products rather than by addition of the preservative compounds to the glue.
- (b6) Approved for use on softwood veneer based products made up of veneers greater than 3.2 mm and up to and including 4.3 mm thick.
- (c) Treated timber shall contain not less than 15% of the nominated minimum retention of total active element as elemental copper, 25% as elemental chromium and 20% as elemental arsenic.
- (d) Nominal actives composition of ACQ2100 is 61.5% Cu and 38.5% DDAC (didecyl-dimethylammonium chloride), when expressed as % of total actives. In the formulated preservative and in the preservative solution used to treat timber, the composition of the actives shall fall within the limits:

Cu 53-69% DDAC 31-47%

- (e) Treated timber shall contain not less than 45% of the nominated minimum retention of total actives as Cu, and 30% as DDAC.
- (f) Compounds of boron which dissociate in aqueous solution to yield borate ions are included in Column 1.
- (g) Compounds of fluorine which dissociate in aqueous solution to yield fluoride ions are included in Column 1.
- (h) When exposed to a H2 hazard (i.e. used internally above ground and protected from the weather), the following species and hybrid when plantation grown in Australia, are considered to be durability class 1 or 2.

 - Maritime pine (*Pinus pinaster*)

- (i) Particles shall be no thicker than 3 mm.
- (j) Creosote used in the formulation of this preservative must comply with the requirements of Australian Standard AS 1 143 1973 High Temperature Creosote for the Preservation of Timber. It may be used in the undiluted form or as the active component of pigment emulsified creosote (PEC).
- (k) This fungicidal preservative treatment is approved only when present together with a complementary approved insecticide preservative treatment.
- (l) This insecticidal preservative treatment is approved only when present together with a complementary approved fungicidal preservative treatment.
- (m) *E regnans*, *E delegatensis* and *E obliqua* to a maximum thickness of 35 mm only.
- (n) Copper Naphthenate used in the formulation of this preservative must comply with the requirements of British Standard BS 5056 - 1974, Specification for Copper Naphthenate Wood Preservative.
- (o) The organotin compound used in the formulation of this preservative must contain not less than 90% of its tin content as the nominated bis-tri(n-butyl) tin compound. This preservative is not approved for weather exposed decking.
- (p) All timber treated with this preservative must be pre-primed with an opaque finish before sale.
- (q) This preservative treatment is approved only for veneer and type A bonded laminated veneer products constructed from treated veneer.
- (r) In the preservative used to treat veneers, the ratio of the BAC homologues shall be:

 - C12: (54% minimum)
 - C14: (14% minimum)
 - C16 + C18: (18% minimum)
- (s) Heartwood durability class of each timber species is listed in Schedule 9. Penetration Pattern descriptions depend on the heartwood durability class of the timber species involved.
- (t) **For sawn timber** of these low heartwood durability classes, there should be an envelope of penetration, of the specified depth, from all heartwood surfaces on the piece. However, this envelope is not required where unpenetrated heartwood comprises less than 20% of the cross-section of the piece, does not extend through the piece from one surface to the opposite surface, and does not exceed half the dimension of any side of the piece on which it occurs.

For laminated veneer products of this low heartwood durability class, unpenetrated heartwood is not permitted in the face and back veneers nor within 150 mm from the ends and edges of the sheet in the other veneers, but is permitted within the remainder of the other veneers provided that it does not comprise more than 35% of the thickness of the sheet at any point.

- (u) Laminated veneer products over 20 mm thick must be treated to the same penetration pattern as sawn timber for the relevant H level (patterns A, B, C, D, E and G). Laminated veneer products 20 mm thick or less may be treated to the same penetration patterns, or optionally it may be treated to pattern P, where only an envelope of penetration is achieved. Laminated veneer products treated to Pattern P may be sold only if each sheet bears a printed warning label, advising on suitable remedial treatments to apply if the envelope of preservative is broken. Unpenetrated heartwood is permitted within 150 mm from the ends and edges of the sheet in the core veneers, provided that it does not comprise more than 35% of the thickness of the sheet at any point.
- (v) For H5 and H6 conifer marine piles, building and transmission poles, all sapwood and a complete annulus of not less than 35 mm depth shall be penetrated.
- (w) The nominal composition of Tanalith E is 96.2% elemental copper plus 3.8% tebuconazole when expressed as percent total active. In the formulated preservative and in the preservative solution used to treat timber, the composition of tebuconazole expressed as a percent of total active ingredients shall fall within the limits:

Tebuconazole 4.18% - 3.42%
- (x) Treated timber shall contain not less than 86% of the nominated minimum retention of total active elements as Cu and 3.4% as tebuconazole.
- (y) All products treated to this retention must bear a printed warning label, advising that the product may not be used North of the Tropic of Capricorn.

ELECTORAL COMMISSION OF QUEENSLAND

In accordance with Section 63 of the *Electoral Act 1992*, I have ascertained and set out in Schedule A hereunder, as at the date indicated, the number of electors enrolled in each Electoral District for the State of Queensland and have determined the average district enrolment and the extent to which the number of electors enrolled in each district differs from the average enrolment.

Schedule B indicates the adjusted enrolment for Electoral Districts of 100,000 square kilometres or more in area, being the sum of the number of enrolled electors and the additional large district number as specified in Section 45 of the Act, and the extent to which those districts differ from the average district enrolment in Schedule A.
