IMPORTANT NOTICE Where the Services of a Pilot are Required

PROVISION OF A PILOT

- Legislation requires that a person must not navigate a ship in a compulsory pilotage area unless the person uses the services of a pilot.
- person uses the services of a prior.

 From 2 November 2013, changes to the *Transport Operations (Marine Safety) Act 1994 passed the responsibility for the provision and delivery of port pilotage services for ports north of Brisbane (except Abbot Point) to the port Government owned corporations. This is being achieved by giving port authorities the legal responsibility for the provision and delivery of pilotage services in designated Compulsory Pilotage Areas. The Responsible Pilotage Entities for all Compulsory Pilotage Areas are specified in Schedule 6 of the *Transport Operations (Marine Safety) Regulation 2004 (TOMS Regulation), as follows:

Column 1	Column 2
Compulsory pilotage area	Responsible pilotage entity
Southport pilotage area	Maritime Safety Queensland
Brisbane pilotage area	Maritime Safety Queensland
Bundaberg pilotage area	Gladstone Ports Corporation
Gladstone pilotage area	Gladstone Ports Corporation
Rockhampton pilotage area	Gladstone Ports Corporation
Hay Point pilotage area	North Queensland Bulk Ports Corporation
Mackay pilotage area	North Queensland Bulk Ports Corporation
Abbot Point pilotage area	Maritime Safety Queensland
Townsville pilotage area	Port of Townsville Limited
Lucinda pilotage area	Port of Townsville Limited
Mourilyan pilotage area	Far North Queensland Ports Corporation
Cairns pilotage area	Far North Queensland Ports Corporation
Cape Flattery pilotage area	Far North Queensland Ports Corporation
Skardon River pilotage area	Far North Queensland Ports Corporation
Thursday Island pilotage area	Far North Queensland Ports Corporation
Weipa pilotage area	Far North Queensland Ports Corporation
Karumba pilotage area	Far North Queensland Ports Corporation

- Maritime Safety Queensland has entered into an agreement with Port of Townsville Limited to deliver pilotage services in the Abbot Point Compulsory Pilotage Area.
- The Responsible Pilotage Entity may provide services on the basis that:
 - the person to whom the services are provided accepts the risk of loss or damage caused by an act or omission by the Responsible Pilotage Entity and waives any right to claim against the Responsible Pilotage Entity in contract, tort or otherwise howscover, for any loss or damage (including consequential loss) to any person or property which arises directly or indirectly out of the provision of the pilotage services; and
 - The Responsible Pilotage Entity is not obliged to provide or arrange for the provision of the pilotage services if circumstances beyond their control mean the services cannot reasonably be provided at the time requested or at all and no compensation will be payable in this event.

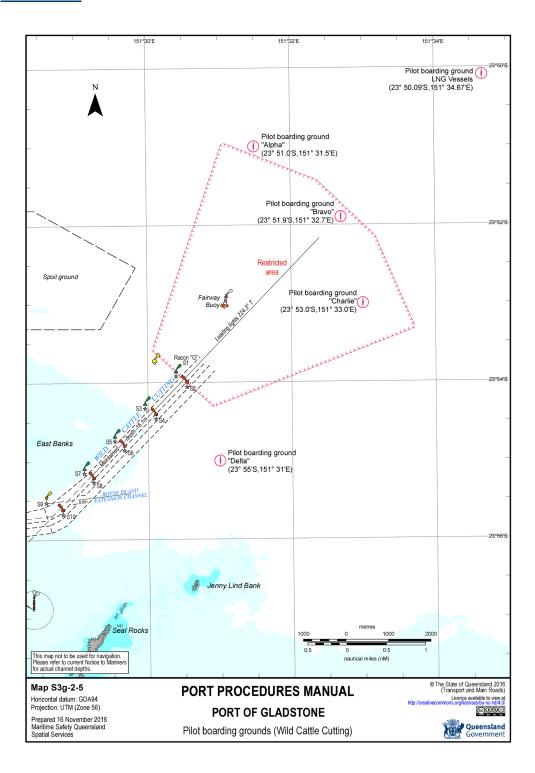

Circumstances beyond the control include, but are not limited to:-

- industrial action by pilots, line boat operators or others;
 inability to schedule a pilot at the time required;
 any direction or regulation having the effect of prohibiting or preventing the carrying out of the pilotage; or
 a failure by a sub-contractor to carry out any part of the pilotage services.

16.7 Pilot Boarding Grounds (Gladstone)

For a high resolution map please visit <u>Section 16.7 Pilot Boarding Grounds (Gladstone) - Gladstone: Port Procedures and Information for Shipping - Publications | Queensland Government</u>

16.8 Helicopter Operations Information (Gladstone)

You must advise your agent at least 12 hours prior to pilot boarding that you have read and understood these regulations; failure to do so will result in delays to your ship.

The embarkation and disembarkation of personnel by helicopter imposes certain mandatory conditions on the part of the ship and you, its master. These will involve the deck party being at a state of readiness for emergency action of a different nature but to a greater degree of preparation than that required for pilot launch transfer operations. If the helicopter attempts to make an emergency landing on board this may involve flying debris, spilt fuel with the associated danger of fire and more than likely, seriously injured personnel.

To assist in helicopter transfers, it is mandatory for the vessel to ensure that the <u>Gladstone Pilot Helicopter (Landing) Operations form</u> (16.9) is completed and returned to the Gladstone VTS Centre when the vessel booking application is made.

Under no circumstances will helicopter landings or uplifts be permitted from any vessel when bunker barge MV *Larcom* is moored alongside such vessel. This applies regardless of whether or not fuelling operations are in progress.

Further and more detailed information may be obtained from AMSA Marine Notices, AMSA Marine Order 57 and the International Chamber of Shipping (ICS), 'Guide to Helicopter/Ship Operations'.

Tankers operating without inert gas:

Tankers operating without inert gas may only berth at a non-tanker berth provided all cargo tanks, slop tanks, cargo lines and associated pipe work are certified gas free by an independent chemist. That is, that the vessel is in a completely gas free condition.

Tankers operating with inert gas:

- The vessel's inert gas system MUST be fully operational so as to maintain a positive pressure in inerted tanks at all times. If work is to be carried out on the ship's inert gas installation or boiler or other sections of plant or piping which affect inert gas supply, an independent supply of inert gas is to be put into place and fully operational prior to repair work commencing.
- Any tank, including slop tanks, containing high flash point cargo or residues, MUST have the ullage space maintained in an inert condition unless otherwise authorised by the Gladstone Ports Corporation.
- All empty tanks that last carried a low flash cargo MUST be washed and/or gas freed and not have a vapour test reading in excess of the equivalent to 1% hydrocarbon as referenced to Hexane.
- Any empty tank that last carried a low flash cargo and has not been gas freed MUST not have a hydrocarbon content exceeding 2% by volume.
- Special conditions apply to slop tank(s) that contain low flash point slops/products.
- a) Wherever possible slops should be confined to a single designated slops tank.
- b) If the flash point is <60°C then the tank MUST be tested and certified that the content of low flash product within the slops does not exceed 5% of the tank's volume.
- c) The ullage space of the slop tank MUST be inserted.
- Positive inert gas pressure on tanks is to be maintained at all times and the oxygen content of the inert gas MUST not exceed 5%.
- If a vessel's inert gas system were not operational, then she would be classed as a "tanker operating without inert gas" and is to follow the requirements as per a vessel of this type.

Instructions to Masters of ships berthed within 800 metres of a nuclear powered warship berthed in the port of Gladstone.						
A Nuclear Powered Warship, the is berthed within 800 m of your vessel.						
The vessel is	s due to	depart on:				
In case of a reactor accident in the vessel the Regional Harbour Master via GLADSTONE VTS on VHF channels 13 or 16 will advise. On receipt of such advice, you are requested to take the following action:						
As far as possible, shut down ventilation or turn to recirculation and close hatches, scuttles, port holes, doors and openings, etc, to minimise the ingress of airborne radioactive material;						
If non-essential personnel have access to transport they should self-evacuate to the assembly area, which is situated on Emergency services personnel will direct your personnel to the assembly area.						
All personnel remaining on board should seek shelter below decks until otherwise instructed. Ideal shielding is likely to be provided by your accommodation and/or engine room;						
You should contact Gladstone VTS on VHF channel 13 or 16 if you have any queries.

16.37 Deed of Indemnity – Port of Gladstone Escort Tugs

Please follow this link to access the official fillable PDF form: <u>F5374 - Deed of Indemnity - Port of Gladstone Escort Tugs</u>

This is a replica of the form and is not intended to be used

Our red Voor red Enquiries John Falton Name and address:	Print Form Reset Form	Queensland Government Department of Transport and Main Roads	Please sign and return the following enclosed documents: 1. Duplicate of this letter 2. Deed of Indemnity. Should you have any questions regarding this, please contact me at the Gladstone office on 4971 5200.
			Yours faithfully
Date: Dear Captain/Madam/Sir,			CICA .
Deed of Indemnity - Port of GI Vessel All Liquefied Natural Gas (LNG)	adstone Escort Tugs	stone will be required to connect	VN

Background

This letter relates to Chapter 9 Tug Requirements for LNG, and Appendix 16.39 Deed of Indemnity – Port of Gladstone Escort Tugs (attached) of the Port Procedures and Information for Shipping – Gladstone (PPM Gladstone) as updated from time to time. The PPM Gladstone requires the use of escort tugs for LNG vessels entering the port.

two escort tugs which will be tethered in tandem when entering and departing the harbour. The process of

Port of Gladstone. Tugs specifically designed for the task will be utilised for escort towage.

Tethered Escort Towage (TET) has been extensively simulated to prove the feasibility of the operation in the

For TET, all LNG vessels are required to be equipped with bitts, bollards, chocks and fairleads with a minimum Safe Working Load (SWL) of 150 tonnes.

Further matters

LNG vessels will transit all channels and cuttings with two approved escort tugs at speeds up to about 10 knots with tugs made fast. Although the decision as to where to make the tugs fast will be made after consultation between the pilots and the LNG vessel master, it is expected that both escort tugs should be attached on the stern (tandem deployment) for inbound and outbound transits of the port.

Four escort tugs should be ready to make fast between A1 and A5 subject to the discretion of the harbour pilot in charge in conjunction with the vessel's master. All tugs will be progressively released on departure between A5 and A1 also subject to the discretion of the harbour pilot in charge in conjunction with the vessel's master.

Requirements

The tug securing equipment on your vessel may require tethered escort tugs to exceed the equipment's maximum SWL.

It is a condition of approval of escort towage for your vessel, as described above, that you provide an indemnity in relation to any damage caused by the escort tugs to your vessel.

16.38 Vessel Interaction Prevention CCF Berths

10 December 2021

Dear Captain

VESSEL INTERACTION PREVENTION CCF Berths

You are currently berthed at the Clinton Coal Facility (CCF), this Department of Transport and Main Roads places your vessel close to the channel used by outbound deep draft vessels departing the WICET coal terminal, or from deep draft vessels departing CCF1 (if you are berthed at CCF2, CCF3 or CCF4).

Whilst every effort will be made to reduce the effects of interaction of passing vessels on your vessel, it is important that you:

- 1. Follow the direction of Wharf Supervisors at CCF with respect to mooring lines,
- 2. Ensure your vessel is hard against fenders when a deep draft vessel from WICET or CCF1 is passing, and
- 3. Maintain a continuous watch on VHF channel 13.

Yours faithfully,

John Fallon Regional Harbour Master – Gladstone

Maritime Safety Queensland-Gladstone Level 7, 21Yaroon Street Gladstone Queensland 4580 PO Box 123 Gladstone Queensland 4680 Telephone: +61 7 43715200 Facsimile: +61 7 4971 5243 Website:

16.39 Barney Point Wharf Passing Vessel Interaction Prevention

24 June 2014

To Whom It May Concern

BARNEY POINT WHARF PASSING VESSEL INTERACTION PREVENTION

- 1. In April 2012 Gladstone Ports Corporation met with key stakeholders regarding Vessel Interaction at Barney Point and how best to mitigate the risk of vessels pulling away from the Berth, during passing by a deep draft vessel. The result of this meeting was a Memorandum, issued by GPC detailing additional requirements for vessels berthed alongside Barney Point when all of the following conditions are met:
 - a. Vessel passing Barney Point Wharf is >14.0m draft
 - b. Vessel at Barney Point Wharf is >13.5m deepest draft
 - c. Length Overall of vessel at Barney Point Wharf is >225m
 - d. Beam of vessel at Barney Point Wharf is ≥32m
- 2. The requirements to be implemented when all the above conditions are met are:
 - a. A pilot is to be on board 30 minutes prior to the vessel passing,
 - b. A tug is to be ready to engage 30 minutes prior to the vessel passing and remain ready until the vessel has passed and is clear,
 - c. The vessel crew should tension lines and put them on the brake 30 minutes prior to the vessel passing and be clear of the deck 10 minutes prior, and
 - d. The gangway is to be raised until the vessel has passed and is clear.
- 3. In view of the continued risk of vessel interaction at Barney Point and to maintain safety, I am writing to advise that the decisions from the April 2012 meeting remain extant and that charges incurred will be sent to the Shipping Agency of the ship alongside Barney Point.
- 4. In addition since the introduction of the requirements of the Memorandum in 2012, additional requirements have been implemented to further mitigate risks. These include the requirement for vessels to have the starboard side anchor lowered underfoot at all times while made fast and for vessels to maintain 1.0m Under Keel Clearance at all times while alongside. These requirements will also continue to be enforced.

- 5. For your information, vessels berthing at Barney Point and the Clinton Coal Terminal are presented with a direction from myself by the Pilot on-board when they arrive. This direction lists the requirements for vessels alongside both facilities. A copy of this form is also enclosed.
- 6. Please don't hesitate to contact me any further information.

Yours faithfully,

John Fallon Regional Harbour Master – Gladstone
